

## Two-way Humidity Control for Reeds

Reed Vitalizer offers maintenance-free reed storage. The patented Humidipak technology uses two-way humidity control to keep your reed tips flat and prevent cracking and warping. Reed Vitalizer control packs will last 45-60 days. When the pack becomes hard, discard and replace with a new pack.

- Stores reeds at ideal humidity levels
- Self-regulates humidity with no maintenance
- 84%, 73%, & 58% humidity levels available
- Reed tips stay flat
- Reeds are ready to play

"I have found the Reed Vitalizer system to be one of the best solutions to reed problems to appear in many years. Its simplicity and modest cost make it worth a try to solve your reed problems, as well."

- *The Clarinet*, 2005

Note: It is normal to feel some crystallization inside a new Reed Vitalizer packette. Packettes will flucate in weight as they adjust to changes in ambient humidity.

## PRE-CONDITIONING PROCESS WITH REED VITALIZER

**Before** playing your reeds, place them in the High 84% level bag **overnight** for pre-conditioning.

**Immediately** transfer the reeds into the Medium 73% level bag. 73% can be used during the normal break-in process to provide stable storage and prevent the reeds from completely drying out.

For best results during this process, reeds should be played for few minutes daily.

Continue to use the 73% bags for the life of your favorite reeds. -> [Learn More](#)

## **REED VITALIZER: GETTING THE BEST RESULTS WITH 73%**

After you have played through a box of reeds, place them for the first time in the 73% level bag overnight. Then, play each reed daily for a few minutes.

**There is no need to place reeds in water**, simply moisten them in your mouth. Reeds will be ready for normal use.

If you are going to be playing reeds at least every other day, store performance reeds in the 73% level bag from this time on.

## **REED VITALIZER: 84% IS AS HUMID AS IT SOUNDS**

The High 84% level is ultra-humid and is great for players who like their reeds to always be moist.

Reeds stored at 84% require **daily attention** and will **mold** if they are left un-monitored.

The 84% level works best for fast break-in (6-24 hours maximum) making reeds ready to play right away.
